**ARCON 3D Architect software has the ability to create high quality visualisations from a 2D plan. Many architects find a 3D visualisation to be essential when communicating their ideas to clients and colleagues in order to achieve an understanding of a 2D plan. A 3D model can provide clients with a better understanding of a 2D plan, reducing any uncertainties and potential problems. ARCON 3D Architect software will also enable self-builders and home improvers to visualise their plans allowing them to get their designs right at the outset before having to seek professional advice.**

## ARCON 3D

ARCON 3D Architect software is different. Designed especially for architects and self-builders and for the creation of residential and light commercial projects.

ARCON 3D allows users to bring ideas to life whether changing existing homes or contemplating a self build project.

## Home Design Product

ARCON 3D was originally used by professional architects, but has since been discovered by many other users such as self-builders, interior designers, small businesses, room planning and home improvement projects.

The main strength of ARCON 3D Architect software is its ability to create high quality 3D visualisations from a 2D plan easily and accurately. Simply place your construction elements in the 2D project and see these brought to life in a 3D environment. Use the 3D walk through feature to examine your project in close-up detail. Generate rendered images to see the effects of texturing, lighting and shading and save high quality images of any 2D/3D view. ARCON 3D is self-explanatory and therefore project planning and construction will be easier, as results are quickly made evident.

Whether you're an architect, interior designer or home improver, ARCON 3D Architect lets you plan, design and visualise your creative ideas.

## ARCON 3D Architect Reviews

"...I found that working in the 3D view was much more intuitive and I loved being able to change the flooring, cabinets and counters with a few simple clicks..."
